

High Density Storage Cost & Performance Comparison

METRO™ SHELVING UNITS - TOP TRACK & KWIK TRAK **Versus** HIGH DENSITY STORAGE - ROLLER RACK - KLICK CHASSIS

Each system is bespoke and as such requires a free site survey to determine exact specification, design, space envelope and restrictions (doorways, access routes, pillars etc.). We have used the following example to demonstrate cost difference. Whilst in this model we use 6 shelves per bay, any number can be specified dependent upon requirement, as can the actual bay sizes, here represented with a nominal 1500d x 600w x 1800h (approx. depending on system chosen).

TOTAL COST INCLUDING INSTALLATION OF THE ABOVE EXAMPLE

Option 1 Klick Stainless Chassis with Polymer Shelving	£ 11,960 Ex Vat
Option 2 Metro Top Track with Polymer Shelving	£ 13,232 Ex Vat
Option 3 Metro Kwik Trak with Polymer Shelving	£ 14,567 Ex Vat
Option 4 Klick Stainless Chassis with Stainless Shelving	£ 15,875 Ex Vat

In these examples, all of the systems increase storage capacity by 50%, over conventional racking storage, based on 900mm walkways between static bays.

ATTRIBUTES	Option 1	Option 2	Option 3	Option 4
	KLICK	METRO	METRO	KLICK
	CHASSIS	TOP TRACK	KWIK TRAK	CHASSIS
	Poly Shelves	Poly Shelves	Poly Shelves	S/S Shelves
Trip hazard risk on floor	NO	NO	YES	NO
Clear access to active aisle	YES	YES	NO	YES
Sterile pack tear risk	MEDIUM	MEDIUM	MEDIUM	LOW
Easily cleaned by hand	AVERAGE	AVERAGE	AVERAGE	YES
Removable mats for hot wash	YES	YES	YES	NO
Weight loading	EXCELLENT	GOOD	EXCELLENT	EXCELLENT
Ergonomic use fully loaded	EXCELLENT	NO	AVERAGE	EXCELLENT
Hand wheel operation	YES	NO	NO	YES
Adjustable height shelves	YES	YES	YES	YES

The four examples shown do not represent all the shelving options we have available. Further types and materials can be provided. The Attributes table (shown left) represents our own opinion and does not consider end user preference.

Our primary goal is to make recommendations on which you can make informed decisions. After the requirement to maximise space the next consideration should be understanding the products being stored. Boxed general consumables do not need to be stored on stainless shelves - a budget chrome wire system will suffice. Conversely, where sterile packs are to be stored, it would be a false economy to use a system that represents more of a tear risk. As an indication of the difference in price, our budget Klick chassis system with chrome wire shelving (as per the above specification, with 6 shelves per bay) comes in at around £ 9,500 delivered and installed in comparison to £ 15,875 for the stainless steel shelved option.

SIZES

All systems have their limitations but with a vast array of shelf types and sizes we are confident that a system can be tailored to your specific need. All systems are effectively unlimited in terms of length and whilst the Metro options are available in depths of up to 3600mm, the Klick Chassis is already in use with bays up to 7500mm deep.
